Hiring Team

TechSoup Global

Re: Support Engineer (Global Remote)

APPLICATION FOR SUPPORT ENGINEER

Dear TechSoup Hiring Team,

I am writing to apply for the **Support Engineer** position with TechSoup. After more than forty-five years running my own remote IT practice, **Lindell and Associates**, I've spent every week doing the exact work this role describes: owning the end-to-end support experience for a diverse client portfolio, resolving escalations no one else has solved, and building the documentation and workflows that keep small organizations running. TechSoup's mission — equipping the nonprofit sector with the technology it needs to serve its communities — is the kind of work I would be proud to pour the next chapter of my career into.

For decades I have essentially operated as a one-person MSP for real estate firms, law offices, healthcare providers, property management companies, and retail businesses across the Yakima Valley and beyond. That means I have carried, day in and day out, the same responsibilities the Support Engineer role asks for: **triaging and closing tickets, owning Tier 2/3 escalations, coordinating with vendors, documenting SOPs, and coaching non-technical users**. My clients have stayed with me for ten, fifteen, sometimes twenty years — a testament to the reliability, responsiveness, and calm-under-pressure that I believe are the true differentiators in senior IT support.

How my background maps to what TechSoup needs:

- ▶ **Cross-platform mastery.** I've supported Windows and macOS side by side for the entire span of my career — enrollment, imaging, configuration, patch management, and everyday troubleshooting across mixed fleets.
- ▶ **Microsoft 365 & identity.** Long-standing hands-on work with Exchange, Outlook, Teams, SharePoint, and OneDrive; comfortable in the Entra ID / Azure AD stack for account, mailbox, and access issues, and ready to deepen scripting with PowerShell where it accelerates the queue.
- ▶ **Endpoint, network & security.** Designed, hardened, and supported LANs, VPNs, firewalls, endpoint protection, DNS/web filtering, and MFA/conditional-access flows for organizations that could not afford to be down.
- ▶ **MSP-style queue ownership.** Managing my own portfolio has taught me to think in SLAs — spotting ticket trends, retiring root causes with SOPs or automation, and keeping stakeholders informed at every step.
- ▶ **Documentation & enablement.** Runbooks, how-to guides, and one-on-one and group training have been core to my delivery for decades; I reduce ticket volume by making clients self-sufficient wherever possible.

- ▶ **Strategic transitions.** I've led migrations across email platforms, storage providers, and productivity suites — the kind of Box → OneDrive/SharePoint or DocuSign → Adobe transitions your team is running today — with an emphasis on minimal disruption and reversible change.
- ▶ **Emerging tools.** I actively integrate AI-powered productivity platforms into client workflows and would bring that momentum to Power Automate, Copilot Studio, and Purview adoption at TechSoup.

Beyond the technical fit, TechSoup's values resonate deeply with how I've run my practice. **Promote Trust** is the quiet foundation of every fifteen-year client relationship I've kept. **Be Resourceful** is the daily posture of a solo consultant. And **Be Relevant** is why I keep learning — the industry that hired me in the 1980s is not the industry I serve today, and I've made sure my skills evolved with every wave. I am also entirely comfortable with distributed, asynchronous collaboration, structured written communication, and the occasional maintenance window or on-call rotation; my entire delivery model is already fully remote.

I would welcome a conversation about how my depth of experience, MSP-style ownership, and customer-first approach could strengthen the Support Engineer function at TechSoup. Thank you for your time and consideration — I look forward to hearing from you.

Sincerely,

Mike Lindell

Owner & Principal IT Consultant, Lindell and Associates
